Avawatz Valley Groundwater Basin

- Groundwater Basin Number: 6-26
- County: San Bernardino
- Surface Area: 27,700 acres (43.3 square miles)

**Basin Boundaries and Hydrology**
This groundwater basin underlies Avawatz and Drinkwater Valleys in northern San Bernardino County. The basin is bounded on the north, west, and south by the Granite Mountains, on the east by the Avawatz Mountains and on the southeast by an unnamed fault (Jennings and others 1962). Annual precipitation averages 4 to 8 inches.

**Hydrogeologic Information**

*Water Bearing Formations*
Groundwater is likely found in alluvium of Quaternary age (DWR 1975). Such alluvium likely consists of unconsolidated, fine- to coarse-grained sand, pebbles, and boulders with variable amounts of silt and clay.

*Restrictive Structures*
The northwest-trending Granite Mountains fault zone crosses the central portion of the basin and an unnamed east-trending fault borders the southern portion of the basin; however, it is uncertain whether or not these faults are barriers to groundwater movement.

*Recharge Areas*
Recharge to the basin is most likely from percolation of precipitation and runoff from the surrounding mountains.

*Groundwater Level Trends*
Unknown.

*Groundwater Storage*
**Groundwater Storage Capacity.** The total storage capacity is estimated at 580,000 af (DWR 1975).

**Groundwater in Storage.** Unknown.

*Groundwater Budget (Type C)*
No information is available.

*Groundwater Quality*  
**Characterization.** Unknown.

*Impairments.** Unknown.
