Thousand Oaks Area Groundwater Basin

- Groundwater Basin Number: 4-19
- County: Ventura, Los Angeles
- Surface Area: 3,110 acres (4.9 square miles)

Basin Boundaries and Hydrology
This groundwater basin underlies a small valley between Lake Sherwood and Thousand Oaks in southeastern Ventura County and western Los Angeles County. The basin is bounded by semi-permeable rocks of the Santa Monica Mountains (CSWRB 1953; DWR 1959). The valley is drained by Conejo Creek and Triunfo Canyon. Average annual precipitation ranges from 16 to 20 inches.

Hydrogeologic Information

Water Bearing Formations
Groundwater is found mainly in alluvium, although it is also produced from other older rock units (VCPWA 2002). Groundwater in the basin is unconfined in the Quaternary age alluvium that fills Triunfo Canyon and underlying Conejo Creek. The Miocene age Modelo and Topanga Formations contain productive sandstone beds, and some groundwater is produced from fractures in the Modelo, Conejo, and Topanga Formations (CSWRB 1953; DWR 1959).

Restrictive Structures
Water levels indicate that a groundwater divide exists near Thousand Oaks coincident with a surface drainage divide (CSWRB 1953).

Recharge Areas
Recharge to the basin is by percolation of precipitation to the valley floor and stream flow.

Groundwater Level Trends
Hydrographs show that water levels remained fairly stable during 1979 through 1999. Seasonal change in water level ranges from about 10 to 20 feet. Groundwater moves northwest near Thousand Oaks and southward near Triunfo Canyon (CSWRB 1953).

Groundwater Storage

Groundwater Storage Capacity. The total storage capacity is estimated at 130,000 af (VCPWA 2002).

Groundwater in Storage. The basin is estimated to have been about 87 percent full in 1999 (Panaro 2000), or to have had about 113,000 af in storage.
**Groundwater Budget (Type C)**
No subsurface inflow is known to occur to the basin (CSWRB 1953).

**Groundwater Quality**
**Characterization.** Groundwater in the basin is magnesium-calcium-sodium sulfate in character. TDS content in the basin ranges from 1,200 to 2,300 mg/L with the average at 1,410 mg/L (VCPWA 1996).

**Impairments.** High alkalinity and hardness are prevalent in wells deeper than 100 feet, influencing taste and quality characteristics (VCPWA 1996). TDS is high in this basin.

**Basin Management**

Groundwater management:

Water agencies

Public

Ventura County Public Works Agency,
City of Thousand Oaks Public Works Department.

Private

California Water Service Company – Westlake
District, California American Water Company
