Berryessa Valley Groundwater Basin

- Groundwater Basin Number: 5-20
- County: Napa
- Surface Area: 1,400 acres (2 square miles)

Basin Boundaries and Hydrology
The Berryessa Valley Basin is located on the eastern shores of Lake Berryessa in a sparsely populated region of Napa County along the western flanks of Rocky Ridge in the Coast Ranges, approximately 14 miles northwest of the town of Winters. Two narrow swaths of shallow alluvium along the banks of Lake Berryessa, each about 2.5 miles in length, define the basin. This alluvium extends into the lower elevations of the Berryessa Valley, which was flooded by Lake Berryessa after the construction of Monticello Dam in 1957 (SID 1988).

Putah Creek, which flows into Lake Berryessa, is the primary surface water source for the Berryessa Valley, other than the lake. Additionally, several intermittent streams flow into Berryessa Valley Basin from the east. The basin is located within the Upper Putah Creek watershed, and receives approximately 18 inches to 24 inches of precipitation annually.

Hydrogeologic Information
Water Bearing Formations
Water Bearing Formations include Alluvium, described as poorly sorted stream and basin deposits (Wagner 1987). Beneath the alluvium lies the basement rock of the Lower Cretaceous Great Valley Sequence, comprised of marine mudstone, sandstone, and conglomerate. This basement rock is generally considered to be non-water bearing, but it does provide water through fractures.

Groundwater Level Trends
No information related to groundwater level trends was available for this basin, however it can be generally assumed that the groundwater level elevation mimics the lake surface elevation.

Groundwater Storage
No information is available for Groundwater Storage Capacity and Groundwater in Storage for this basin.

Groundwater Budget (Type)
No information is available.

Groundwater Quality
No information is available.
